## #HitemaValues

Dear Ladies and Gentlemen,

I recently read the story of some people who made the history of cars. I refer to Engineer Lamborghini and Engineer Ferrari. Building every single machine required enormous efforts. Every single machine was considered a creature. Every single machine generated emotions. It's the same for me. Every single machine that Hitema produces reflects the effort that I have invested in thirty years of hard work.

This is a somewhat particular period. All of us must find the right courage to continue our path, indeed if possible we must improve. When I am in production alone, my machines (my creatures) give me immense energy.

This is why Hitema remains an Italian company, managed with passion.

Every single day I invest all my energy in Hitema. Believe me, every single day i'm happy. Effort turns into passion. Willing to do. Want to be judged by competitors. It wants to create. Want to involve people. This is my idea of a company. Hitema international is a part of our family.

I work with passion.  
Thanks for your attention.

Maurizio Burba

*thank  
you*
